

Solar container medical

Overview

The container clinic, called a Clinic In A Can, is a shipping container that is transformed into a self-sustaining, fully functioning medical clinic with two exam rooms, a laboratory, and a mechanical room. CIAC delivers high-quality healthcare solutions that are powered from the electrical grid, a quiet diesel generator, solar panels with a lithium battery, or a hybrid combination of solar and diesel generator. All of the equipment is pre-installed in our factory to your specifications and is ready. In the aftermath of the 2010 earthquake in Haiti, a nonprofit known then as Hospitals of Hope converted shipping containers into mobile medical units to deliver critical healthcare in devastated areas. Clinic in a Can was born. These container-based clinics were initially powered by diesel. One solution to provide refrigeration for medicines and life-saving vaccines in areas lacking electricity is to use solar powered refrigerated containers. Off-grid, solar refrigerated containers are designed to collect solar energy in daylight hours, then to continue cooling by using stored solar. Clinic In A Can, a medical nonprofit organization, recently completed the first fully solar-powered medical clinic constructed in a shipping container. The container clinic, called a Clinic In A Can, is a shipping container that is transformed into a self-sustaining, fully functioning medical. The 20 foot Split Clinic In A Can has two exam rooms in one single container. The clinic is constructed and finished using the exact same material as all of our clinics offerings, which is our standard. The Split clinic has two separate exam spaces that are individually accessed and climate. Rural solar power solutions, such as a 20ft solar container, can provide consistent energy to health clinics. Initiatives like Clinic In A Can demonstrate how rural solar power significantly benefits clinics by improving healthcare delivery, strengthening communities, and supporting public health.
