

# **Solar container policy intelligent interconnection**

## Overview

---

A new US Department of Energy (DoE) roadmap outlines 35 ways to allow solar developers to expedite the interconnection of utility-scale renewables and storage projects. The roadmap, developed through a DoE stakeholder process known as i2X, proposes actions to implement these. Interconnection standards define how a distributed generation system, such as solar photovoltaics (PVs), can connect to the grid. In some areas of the United States, the interconnection process lacks consistent parameters and procedures for connecting to the grid or is unnecessarily complex. This. Sandia National Laboratories is a multimission laboratory managed and operated by National Technology & Engineering Solutions of Sandia, LLC, a wholly owned subsidiary of Honeywell International Inc., for the U.S. Department of Energy's National Nuclear Security Administration under contract. Energy storage has a unique and pivotal role to play in the transition to a low-carbon economy because it can help the electric grid accommodate more renewable energy. However, a number of barriers currently impede the process of connecting energy storage systems to the distribution grid. The. Interconnection standards specify the processes, timelines, costs, and technical requirements associated with connecting distributed energy resources (DERs), such as solar and energy storage systems, safely and reliably to the grid. They are effectively the "rules of the road" that must be followed. California's 2025 Energy Code (Title 24) brings significant changes, mandating solar and energy storage for new construction, including single-family homes, multifamily units, and specific non-residential properties. These updates aim to enhance onsite clean energy use and reduce reliance on the. Building a reliable, secure, and affordable energy system will require solar and storage to meet U.S. energy demand for which we will need every electron that be can put on the grid. With these technologies already making up the majority of new generation being built and planned, achieving.
