Overview

If you invest in renewable energy for your home such as solar, wind, geothermal, fuel cells or battery storage technology, you may qualify for an annual residential clean energy tax credit. Explore the latest solar market insights and policy updates in all 50 states and Washington, D.C. All market data is current through Q2 2025. California leads as the top solar state. With over 52 GW of solar installed, enough energy to power over 14 million homes. Texas has the fastest growing. With the federal solar tax credit ending much sooner than expected — you now only have until Dec. 31, 2025, to install a system and get the 30% solar tax credit — it's definitely in your best interest to take advantage of all the solar incentives available to you. We're here to help you navigate. The 30% federal solar tax credit, the single biggest financial incentive for homeowners installing solar, will officially end at the end of December. Any system installed after this year won't qualify for the discount that's helped millions of households cut thousands off their installation costs. Government subsidies for solar energy are a game-changer when it comes to getting homeowners on board with renewable energy sources. These financial incentives—think tax credits, grants, and rebates—are all about making it easier for you to install solar panels, which can help you save on those. In 2025, government solar programs continue to make solar energy more affordable and accessible than ever. From federal tax credits to state and local incentives, these programs can significantly reduce the cost of going solar. Let's explore the various government solar programs available to. Every state offers specific ways to help you save money on solar power. These come in various forms, including tax credits, rebates, and performance payment programs. "Solar panels reduce how much electricity a homeowner must buy," says Mark James, interim director of the Institute for Energy and.
