std::future::wait_for

If the future is the result of a call to `std::async` that used lazy evaluation, this function returns immediately without waiting. This function may block for longer than `timeout_duration` due to ...

std::future::wait_until

`wait_until` waits for a result to become available. It blocks until specified `timeout_time` has been reached or the result becomes available, whichever comes first. The return value indicates why ...

Mockito is currently self-attaching to enable the inline-mock-maker

I get this warning while testing in Spring Boot: Mockito is currently self-attaching to enable the inline-mock-maker. This will no longer work in future releases of the JDK. Please add ...

What is a Future and how do I use it?

A future represents the result of an asynchronous operation, and can have two states: uncompleted or completed. Most likely, as you aren't doing this just for fun, you actually need the ...

What is `__future__` in Python used for and how/when to use it, and ...

A future statement is a directive to the compiler that a particular module should be compiled using syntax or semantics that will be available in a specified future release of Python. The ...

std::future::get

The `get` member function waits (by calling `wait()`) until the shared state is ready, then retrieves the value stored in the shared state (if any). Right after calling this function, `valid()` is false.

...
