### Understanding Python super() with \_\_init\_\_() methods

super() lets you avoid referring to the base class explicitly, which can be nice. But the main advantage comes with multiple inheritance, where all sorts of fun stuff can happen.

### sql

En mí base de datos creé un evento que funciona, está en "Enabled", pero no puedo iniciarlo porque necesito privilegios SUPER en PhpMyAdmin. En la sección de Eventos esta la siguiente opción: Es

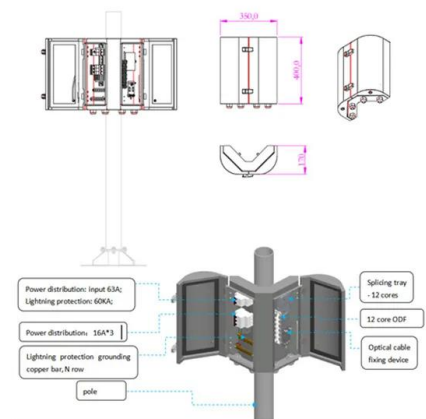

### How does Python's super () work with multiple inheritance?

In fact, multiple inheritance is the only case where super() is of any use. I would not recommend using it with classes using linear inheritance, where it's just useless overhead.

### 'super' object has no attribute '\_\_sklearn\_tags\_\_'

'super' object has no attribute '\_\_sklearn\_tags\_\_'. This occurs when I invoke the fit method on the RandomizedSearchCV object. I suspect it could be related to compatibility issues ...

## Difference between super T> and extends T> in Java

What is the difference between List super T> and List extends T> ? I used to use List extends T>, but it does not allow me to add elements to it list.add (e), whereas the Li

## AttributeError: 'super' object has no attribute

I wrote the following code. When I try to run it as at the end of the file I get this stacktrace: AttributeError: 'super' object has no attribute do\_something class Parent: def \_\_init\_\_(self):

## coding style

As for chaining super::super, as I mentioned in the question, I have still to find an interesting use to that. For now, I only see it as a hack, but it was worth mentioning, if only for the differences with Java ...
